# Code Changer
For Pegasus Opera 3

A suite of utilities to manage the key codes of your data.

Code Changer is available for the Sales Ledger, Purchase Ledger, Nominal Ledger and Stock Control module.

It allows the user to re-name or re-number the Customer A/C Number, Supplier A/C Number, Nominal A/C Number, or Stock Reference.

In each case, all of the corresponding fields in the associated tables are updated such as the Transactions, Sales Orders, Purchase Orders, Journals, and Stock Movements to ensure data integrity.

The Toolkit is required in order to use this add-on. Exclusive access is required and it does not update the Document Management system.

Contact us with any questions you may have or to discuss your other requirements.
